PUBLIC NOTICE

**RECORD OF DECISION FOR
OPERABLE UNIT 2 AT THE
NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION JET
PROPULSION LABORATORY
IS AVAILABLE FOR PUBLIC
INSPECTION**

The National Aeronautics and Space Administration (NASA) invites the public to inspect the Record of Decision (ROD) and Remedial Action Plan for Operable Unit 2 at the Jet Propulsion Laboratory (JPL). The ROD presents the selected remedial action for cleanup of soils and was prepared under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLA regulates the cleanup of National Priorities List (NPL) sites, such as JPL. JPL was added to the NPL in 1992 after an initial inspection revealed the presence of volatile organic compounds (VOCs) and other chemicals in the subsurface.

The ROD provides information about the alternatives considered for remedial action, and identifies the remedy chosen with the rationale for selection. NASA has selected soil vapor extraction (SVE) as the preferred remedy for recovering VOCs from the soils. SVE systems are designed to remove chemicals that have a tendency to evaporate or "volatilize" easily by applying a vacuum through a system of underground wells. The VOCs are pulled from the subsurface in vapor form, where they then are treated. SVE was shown to be effective based on pilot testing at JPL and is expected to achieve cleanup objectives.

Public meetings were held in May and June 2001 at JPL and the Eliot Middle School Auditorium to discuss the alternatives for cleanup presented in the Proposed Plan. After addressing comments received during the public meetings, NASA proceeded with preparing the ROD. The ROD was signed in September 2002 by representatives from NASA, the United States Environmental Protection Agency (EPA), the California Environmental Protection Agency Department of Toxic Substances Control

(DTSC), and the Regional Water Quality Control Board (RWQCB) - Los Angeles Region.

The public is invited to inspect the ROD and associated support documentation, which are available at the following information repositories.
